

PRIORITY

Critical Communications for 5G

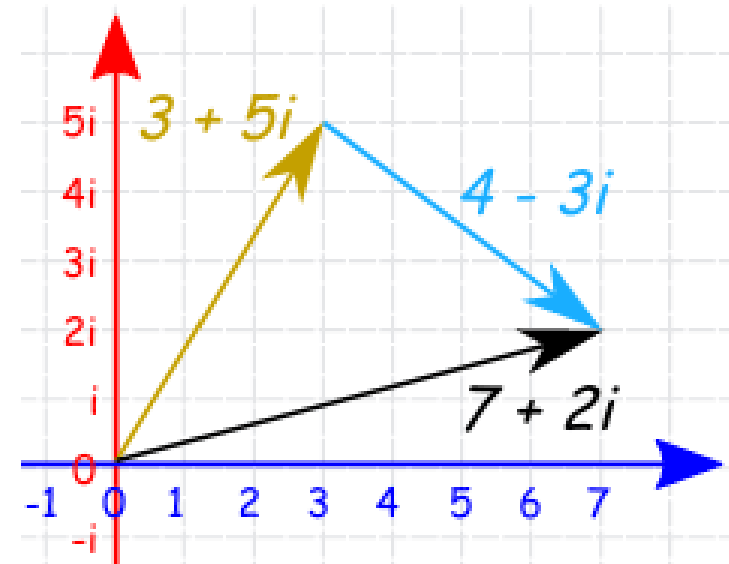

Harri Posti

5G Summit, Levi, 25.3.2019

Global paradigm shift

But...

Digital Infrastructure is the New Critical Infrastructure

Drivers for Digital Trust

- Cyber threats are the main technological threats for global economy
- Always on – always available connectivity is shaping the society
- Political instability and threat scenarios mean new hybrid threats
- Quantum technologies will shape the future of secured and trusted solutions

Global Market Opportunity

- Global market volume in just cyber security area 240 Bn\$ by 2025
- General digitalisation market (798 Bn\$ by 2025) and indirect effects even much more

Topics

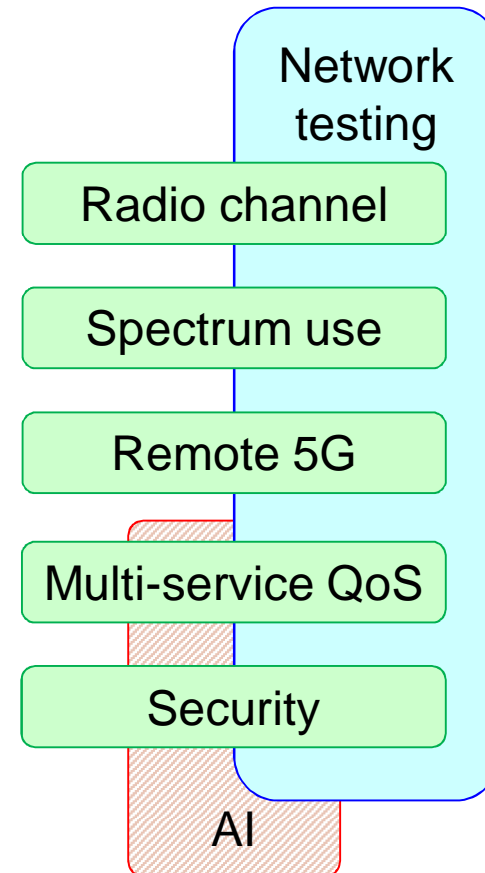

3 scenarios

Scenario 1
Search and capture:
illegal border crossing

Scenario 2
Smart rural business:
business at a remote
location

Scenario 3
Emergency response:
major accident at a remote
location

7 research areas

Methodology

Scenario definition

Use case definition

Requirements; quality and capabilities

Solution research; measurement, theory, simulation

Trial capability; architecture, hardware and software

Real life trial

Outcomes

- Emergence and evolution of Critical Communication business ecosystems.
- Creation of a strong global position in public safety communications and situational awareness for the partner companies.
- Research results as well as validated technologies and solutions for the partner companies in the area of Critical Communication.
- National security and rural economy.
- Emergence and success of 5G technology, as an enabler for new vertical applications.
- Application of other evolving ICT technologies in Critical Communication solutions.
- Background information for the regulation of Critical Communication and wireless technology.
- Academic success of the research partners.
